

## CONSTRUCTION FIELD RECORDER

IF we have court reporters for legal transcripts  
and, field records are used in Court as a contemporaneous record,  
then, Why aren't Construction Field Recorders trained in field processes, practices and general knowledge?  
For accurate and formatted contemporaneous records,  
Why don't construction schools recognize this as an occupation and teach it?

I CAN DO THAT

**LinkedIn Groups**

- Group: Construction Claims Network
- Discussion: Poor Construction Daily Reports

a complete and well documented daily report can and usually is very useful for making or defending claims  
an incomplete and poorly documented report is a useless piece of paper (I'd rather not use the S.H.I.T. word, as it stinks.)

In my practice, I usually had a junior lawyer at site from day one specially designated as responsible for revising the daily reports in detail.

In my experience, it has always been worth having this system.

WHY DIDN'T THEY HIRE ME?

**LinkedIn Groups**

- Group: Construction Claims Network
- Discussion: Poor Construction Daily Reports

Gordon - I don't have any hard copy, but I can recall an instance where the General Superintendent of a large institutional project would fill out his daily report by weblog. "See Subcontractor's Daily Report" in his defense, he was actually an excellent superintendent, but was behind the eight ball through no fault of the contractor, and did this in the interest of saving time. We discussed how difficult it would be to address any claim or back-charge based on this kind of daily reporting, and he made the extra effort to complete the report with all the essential information.

### We Have A Critical Job That No One Wants To Do!

- Who out there agrees? (*audience*)
- If no one, then: (*lead-in to next slide*)

---

---

---

---

---

---

---

---

### Please Introduce Me To ...

- A superintendent, General Foreman, foreman or any field manager who can say, "I really enjoy writing Daily Reports and Incident write-ups," or
- "My reports are accurate, descriptive, and carefully linked to all important documents and critical identifying job elements," or
- "Please don't take the report writing task away from me, that's my job."

---

---

---

---

---

---

---

---

### Let's See Some Examples

- Are they valuable documents?
- Are they full of factual gaps?
- Are they informational or do they add to the level of confusion?

EXAMPLE 1

EXAMPLE 2

EXAMPLE 3

---

---

---

---

---

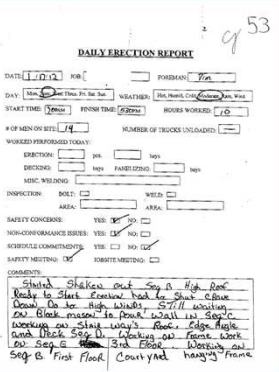

---

---

---

REMEMBER:

- You were never at the job during construction
- The person who created this document is long gone
- You have no explanation of the format of the form or what the yes/no bullets mean
- Where there are incomplete thoughts, you must use your understanding of construction to complete them or draw meaning from them
- Then you must make use of your interpretation!

CONSTRUCTION IMPACT ANALYSTS

---

---

---

---

---

---

---

---

### "THIS ARE MY EXPERT OPINION"

- Who has testified as a percipient witness? *(raise your hands)*
- Who has testified as an expert witness? *(raise your hands)*
- Who has based their opinion solely on existing documentation? *(raise your hands)*
- Who believes that well written contemporaneous documents are extremely important documents?

CONSTRUCTION IMPACT ANALYSTS

---

---

---

---

---

---

---

---

### THEN WHY?

- Do we accept substandard daily reports?
- Why are we not proactive in managing this extremely important company document?
- How in the world can we accept useless trash as our company's vital records?
- You can forfeit your company's entire job profit by an unsuccessful litigation; simply negating years of work.

Hi Gordon  
I do not have any profoma's for Daily Records because Contractor's reporting methods are inevitably completely worthless.  
They should - at the very least - follow two basic principles:  
1. Report on the Programme Tasks  
2. Record who did what when and where and in a comment column Why.  
Following this protocol a weekly record is usually good enough.  
Best regards

Gordon I agree the formal detailed daily reports often form the "foundation" of any future successful claim. I have also found that the contents of personal "logs" or "field books" of key project personnel often yield valuable insight and critical information on sensitive information which might not make it to a formal daily report for various reasons. I would stress to the audience the importance of keeping such logs which, by the way, is good project engineering practice in of itself. I have found that the ultimate "finders of fact" in many dispute resolution forums find such info very "interesting" when presented via a good project fact witness. Of course one has to be mindful of the "double-edged sword" of offering such evidence as the intimate nature of such logs may offer fodder for the opposition on cross examination. Good luck with your talk. - Steve

The problem I find with the contractor dailies is that they are often sporadic, which drains all value. Agree with Gordon and Mike that the daily reports are often Friday look backs (or worse), rushed, and appear to be just going through the motions. I will say that if done properly and issues are tracked contemporaneously (particularly those that are heading for dispute), these dailies coupled with a seasoned superintendent make for a very credible show.

Gordon  
I can't tell you the times I have been down the road with daily reports of varying value... They are the scale from those that are very detailed to those that are pretty much useless.  
We do a exercise on scheduling and the first thing I tell the group is that any entry made in your schedule (or anywhere else) needs to have a source document by which it can be verified. Your task is to take whatever is in good if it isn't backed up by the CDR, REPORT and other source documents including meeting minutes, photographs, telephone conversation records, but don't hand these in Excel, include these items printed, the painful effort to separate out a single document (such as the superintendent's daily report) without touching on the other "books" or the process used to document a project and the importance of accuracy and support in all of them.  
In the day of electronic media I find a lot of contractors are doing the daily log electronically which isn't as effective or as good as the old emulgated up hand written diary. Back in the day I kept mine in a Springer's notebook because it fit in the top pocket of a pair of Levis, really well.  
Unfortunately the best daily reports I'd like to send you for examples were hand copies and have been sent to storage. I just noticed I did have one example that is not so good that I am e-mailing.  
I should realize that the absence of good daily reports has but more than one construction chance of recovery in claim... probably more damage by not having good reliable information to show that by no information at all. The authors of day reports do sometimes write some "damning" statements.  
I'd really like to have a copy of Mike's paper and your presentation. [aroth@thrupp.com](mailto:aroth@thrupp.com)

### This Person Is A Professional

- Must be seen as a Professional
- Must be fully recognized as a member of the Project/Field Teams
- Must be Respected, Fully Utilized, and Communicated With On a Timely Basis
- This person is the Job's/Company's Historian
- This Person May Have to Testify in Your Behalf
- This Person Must Be Compensated as a Professional

---

---

---

---

---

---

---

---

### Traits Of A Field Recorder

- Be a good and Careful Listener!
- Be Continuously wide open to learning
- Be self initiated, extremely curious and inquisitive, detail-oriented, (No question is stupid or unimportant; that's the job)
- Be a good handle on the English Language!
- Be a typist and not afraid of a computer
- Be not easily intimidated, but polite
- Be able to function in a chaotic, loud, down to earth work environment

---

---

---

---

---

---

---

---

### They Are NOT

- They are not doing this one day and filling in for someone else the next; THIS IS THEIR FULL-TIME JOB
- They are not a designer
- They are not a flunky
- They are not a laborer
- They are not an errand boy/girl

---

---

---

---

---

---

---

---

## As An Intelligent/Knowledgeable Field Reporter

- Now the Superintendent and/or foreman can intelligently communicate contemporaneous information and facts
- This is where the training and ongoing experience pays off
- The field reporter and other field personnel have two-way communications that create accurate and succinct documentation.

Yes Joe... Your humble opinion is the same as mine. Compliance has been and I suspect will continue to be a problem and we will continue to see varying degrees of it. We just continue to preach the sermon in hopes of making believers of them. Lessons learned from mentors along the way who were smarter than me.
